OBJECTIVE

Motivated and passionate B.Tech student pursuing a degree in Computer Science, seeking opportunities to apply technical skills and knowledge in a dynamic and challenging environment.

EDUCATION

Bachelor of Technology, Dr. APJ Abdul Kalam Technical University, Uttar Pradesh, India 2021 - 2025
Computer Science And Engineering - 6.8 CGPA

Intermediate, Bloom International School, Uttar Pradesh, India
Science(Physics, Chemistry and Mathematics) - 76.4

SKILLS

Programming Languages	C, C++, Python
Web Technologies	HTML,CSS, Javascript, Angular
Backend Technologies	Node.Js
Database Management	MySQL, MongoDB
Content Management Systems	WordPress

PROJECTS

Online Food Ordering Web Application. Developed an online food ordering web application using a combination of front-end and back-end technologies. The application aimed to provide users with a seamless and convenient way to browse food options, place orders, and manage their preferences. The online food ordering web application showcased my proficiency in full-stack web development, including front-end design, back-end logic implementation, database management, and API integration. It demonstrated my ability to work with modern web technologies and deliver a functional and user-friendly application that meets industry standards..[\(Github\)](#)

Car Rental Website Development Project undertook a comprehensive project to design and develop a fully functional car rental website using WordPress. Leveraging the versatility and user-friendly interface of WordPress, I integrated various plugins, features, and tools to create an efficient and interactive platform for users. This project allowed me to gain hands-on experience in WordPress development, plugin integration, e-commerce functionality, and website optimization, showcasing my proficiency in web design and development skills.

E-Commerce Website using WooCommerce Developed an e-commerce website for selling posters using WooCommerce on WordPress. The project involved creating an attractive and user-friendly homepage that effectively showcased various poster categories and featured products. Key functionalities included a seamless ordering system integrated with a secure payment gateway to facilitate smooth transactions. The site was designed to provide a pleasant shopping experience with easy navigation, product search capabilities, and a responsive layout to ensure compatibility across devices. Additionally, the website incorporated essential e-commerce features such as product reviews and order tracking to enhance user engagement and satisfaction.

Catalog Website Project for Client Using WordPress Designed and developed a marketing website for product listing using WordPress for a client. The project featured an attractive and visually appealing homepage to effectively showcase the client's product offerings. Key elements included a comprehensive catalog of products with detailed descriptions and high-quality images. A contact form was integrated to facilitate inquiries from potential customers, alongside prominently displayed seller contact details for direct communication.
